PRODUCT REVIEW & RATING SYSTEM

Charitha - 2520030462
Nandini- 2520090230

ABSTRACT

Online shopping platforms require reliable review systems to help users make informed decisions. However, many existing systems lack authenticity, detailed insights, and interactive features. The Product Review & Rating System addresses these issues by allowing only verified buyers to submit reviews with star ratings, written feedback, and photo uploads, ensuring credibility and trust.

The system includes features such as helpful voting, a Q&A section, and seller responses to improve transparency and user engagement. Users can filter and sort reviews based on relevance, rating, or recency, making it easier to analyze product quality.

Additionally, the system focuses on enhancing user interaction by providing a clean and responsive interface. Developed using modern technologies like React.js, Node.js, and REST APIs, the system ensures fast performance and seamless communication between frontend and backend components.

Overall, this project improves trust, promotes informed decision-making, and enhances the overall user experience in online shopping applications.

INTRODUCTION

In recent years, the rapid growth of e-commerce platforms has significantly transformed the way people shop and make purchasing decisions. Customers increasingly rely on online product reviews and ratings to evaluate the quality, usability, and reliability of products before making a purchase. To address these challenges, the Product Review and Rating System is designed to provide a more reliable, interactive, and user-friendly platform. The system ensures that only verified buyers can submit reviews. It also includes advanced features such as star ratings, photo uploads, a question-and-answer section, and seller responses to improve user engagement and transparency.

- E-commerce platforms rely on product reviews for decision-making
- Existing systems face issues like fake reviews and low credibility
- Users need reliable and interactive review systems
- This project ensures verified reviews, better transparency, and improved user experience

LITERATURE REVIEW:

Existing e-commerce platforms such as Amazon and Flipkart provide product review and rating systems that allow users to share feedback and rate products. These systems offer basic features like star ratings, written reviews, and sorting options. However, studies show that they often lack proper verification mechanisms, leading to fake or biased reviews. Additionally, limited interaction features, such as absence of detailed Q&A support and weak moderation, reduce their effectiveness. This highlights the need for a more reliable, interactive, and secure product review system.

EXISTING METHODS:

- Users can submit star ratings and written reviews
- Reviews are displayed in a list format
- Basic features include:
 - Sorting by date or rating
 - Average rating calculation
- Widely used in platforms like Amazon and Flipkart

Limitations

- No strict buyer verification (fake reviews possible)
- Limited user interaction features
- No proper Q&A or seller response system
- Lack of photo/video review support
- Weak moderation and filtering options

RESEARCH GAPS:

- No strict buyer verification
- Lack of structured feedback
- Limited interaction features
- No proper admin moderation
- Poor scalability

OUR PROPOSAL METHODOLOGY

- Develop a Product Review and Rating System with enhanced reliability
- Allow only verified buyers to submit reviews
- Provide features like:
 - Star ratings
 - Written feedback
 - Photo uploads
- Include interactive modules:
 - Q&A section
 - Seller responses
- Implement advanced filtering and sorting of reviews
- Add a review history for users
- Build a secure admin panel for moderation
- Ensure scalability and performance using modern technologies.

ARCHITECTURE:

User Interface (UI):

- Built using React.js
- Pages: Home, Product Page, Review Section

Components:

- Review Form
- Star Rating
- Review List
- Q&A Section
- Seller Response

State Management:

- Handles user input and dynamic data
- Updates UI without reloading

Routing:

- Navigation between pages using React Router

System Modules

7 core modules working in harmony

Review Form

Star Rating

Photo Upload

Q&A Section

Seller Response

Review List

Admin Panel

MODULE DETAILS:

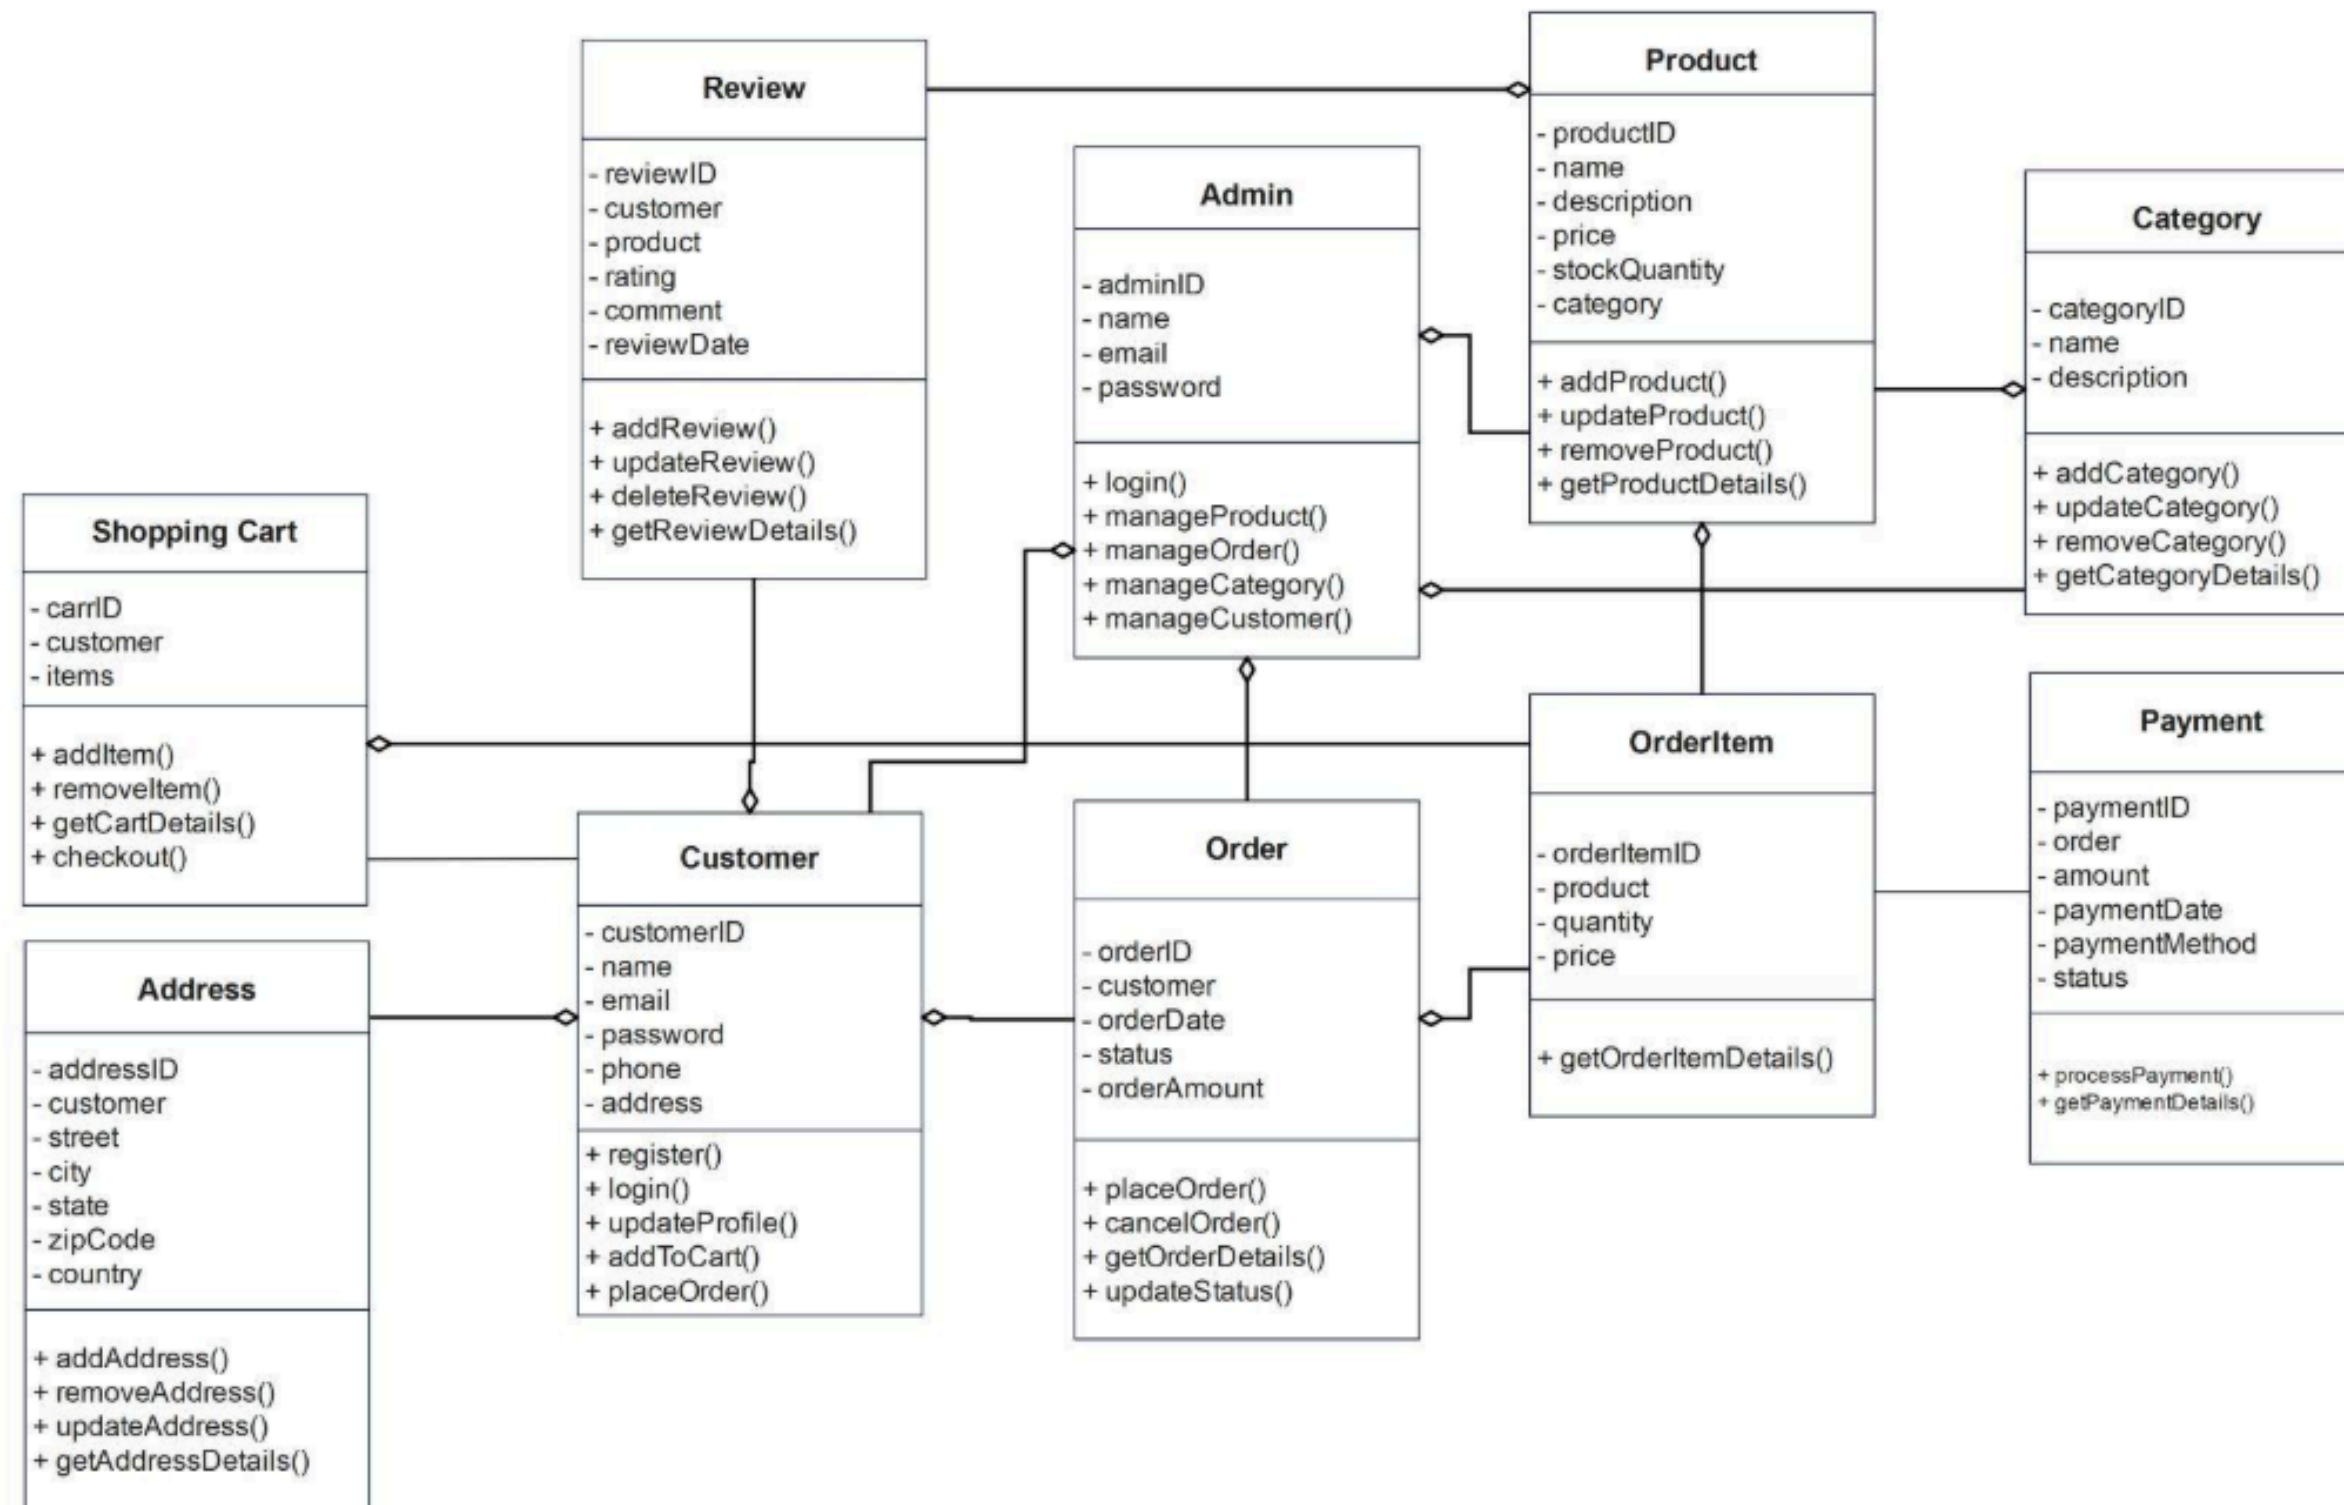

Module Details

- Review Form: Users submit feedback
- Star Rating: 1–5 rating system
- Photo Upload: Add product images
- Q&A Section: Users ask questions
- Seller Response: Sellers reply to users
- Review List: Displays all reviews with filters
- Admin Panel: Manages users and reviews
